- 8. Custom Objects Serilaization
- 9. Code to Generate Slides

Introduction

To see how commands work, use Slides.docs() to see the documentation. Here we will focus on using all that functionality to create slides.

This is inline markdown parsed by magic

Version: 3.2.3 as executed from below code in markdown.

Python

```
# get the slides instance under a python block in Markdown file, we will use it later to
myslides = get_slides_instance()

myslides as isd

version = myslides.version

m
```

I was added at end by a given proxy, see the how it was done at the end of the slides

IPySlides Online Running Sources

- Edit on Kaggle
- Launch example Notebook 8 launch binder
- Watch a Youtube Video
- 1. Add references like this per slide. Use slides.cite() or in markdown cite'key' to add citations generally. $\underline{\leftarrow}$

IPython Display Objects

Any object with following methods could be inwrite command:

_repr_pretty_, _repr_html_, _repr_markdown_, _repr_svg_, _repr_png_, _repr_jpeg_, _repr_latex_, _repr_json_, _repr_javascript_, _repr_pdf_ Such as IPython.display.[HTML,SVG,Markdown,Code] etc. or third party such as plotly.graph objects.Figure.

Plots and Other Data Types

These objects are implemented to be writable in write command:

matplotlib.pyplot.Figure, altair.Chart, pygal.Graph, pydeck.Deck, pandas.DataFrame, bokeh.plotting.Figure, IPython.display.Image Many will be extentended in future. If an object is not implemented, use display(obj) to show inline or use library's specific command to show in Notebook outside write.

Interactive Widgets

Any object in ipywidgets Link to ipywidgtes right here using textbox command

or libraries based on ipywidgtes such as bqplot,ipyvolume,plotly's FigureWidget ¹ (reference at end) can be included as well.

Commands which do all Magic!

Slides.write(*objs, widths=None)

Write objs to slides in columns. To create rows in a column, wrap objects in a list or tuple. You can optionally specify widths as a list of percentages for each column.

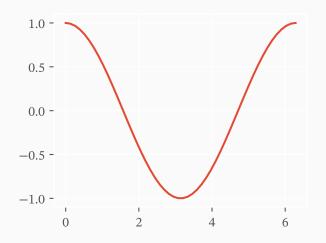

Write any object that can be displayed in a cell with some additional features:

- Strings will be parsed as as extended markdown that can have citations/python code blocks/Javascript etc.
- Display another function in order by passing it to a lambda function like lambda: func(). Only body of the function will be displayed/printed. Return value will be ignored.
- Dispaly IPython widgets such as ipywidgets or ipyvolume by passing them directly.
- Display Axes/Figure form libraries such as matplotlib, plotly altair, bokeh, ipyvolume ect. by passing them directly.
- Display source code of functions/classes/modules or other languages by passing them directly or using Slides.source API.
- Use Slides.alt(widget, obj) function to display widget on slides and alternative content in exported slides/report, obj can be a function to return possible HTML representation of widget.
- ipywidgets.HTML and its subclasses will be displayed as Slides.alt(widget, lambda w: w.value) where w is given widget. The value of exported HTML will be most recent.
- Other options include but not limited to:
 - Output of functions in ipyslides.utils module that are also linked to Slides object.
 - PIL images, SVGs etc.
 - IPython display objects such as Image, SVG, HTML, Audio, Video, YouTubeVideo, IFrame, Latex, Markdown. JSON. Javascript. etc.

Plotting with Matplotlib

```
import numpy as np, matplotlib.pyplot as plt
plt.rcParams['svg.fonttype'] = 'none' # Global setting, enforce same fonts as presentate
x = np.linspace(0,2*np.pi)
with plt.style.context('ggplot'):
    fig, ax = plt.subplots(figsize=(3.4,2.6))
    _ = ax.plot(x,np.cos(x))
write([ax, s.focus_lines([1,3,4])])
```

Writing Pandas DataFrame

		sepal_length		sepal_width		petal_length		petal_width
count	150.000000	1	150.000000		150.000000		150.000000	
mean	5.843333	3	3.057333		3.758000		1.199333	
std	0.828066	(0.435866		1.765298		0.762238	
min	4.300000	2	2.000000		1.000000		0.100000	
25%	5.100000	2	2.800000		1.600000		0.300000	
50%	5.800000	3	3.000000		4.350000		1.300000	
75 %	6.400000		3.300000		5.100000		1.800000	
max	7.900000	4	4.400000		6.900000		2.500000	

```
try:
import pandas as pd

df = pd.read_csv('https://raw.githubusercontent.com/mwaskom/seaborn-data/master/iris
df = df.describe() #Small for display
except:
df = '### Install 'pandas' to view output'
```

Writing Plotly Figure

Install plotly to view output

```
1 try:
2   import plotly.graph_objects as go
3   fig = go.Figure()
4   fig.add_trace(go.Bar(y=[1,5,8,9]))
5  except:
6   fig = '### Install 'plotly' to view output'
```

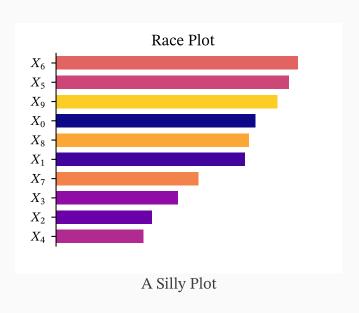

Interactive Apps with Widgets

Use ipywidgets, bqplot,ipyvolume, plotly Figurewidget etc. to show live apps like this!

Tip

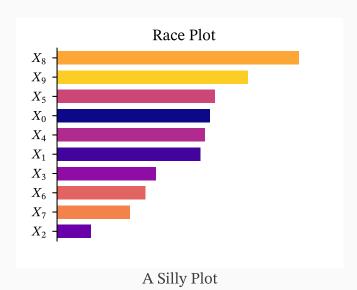

Export to Slides/Report to see what happens to this slide and next slide!

```
import ipywidgets as ipw
   write('''
       ## Interactive Apps with Widgets sec
       Use 'ipywidgets', 'bqplot','ipyvolum
        ::: note-tip
6
           Export to Slides/Report to see w
       111)
8
   plot_html = ipw.HTML('Plot will be here'
   button = ipw.Button(description='Click n
11
   write([plot_html,button], src)
13
   def update_plot(btn):
       plot_html.value = race_plot().value
15
```

Dynamic Content without Widgets

Use refresh button below to update plot! Compare with previous slide!

Python

```
1 write('''
2  ## Dynamic Content without Widgets
3  Use refresh button below to update p
4  ''')
5
6 def display_plot(): return race_plot().c
7
8 write(lambda: slides.on_refresh(display_9 slides.source.from_callable(race_plot).c
```

Python

```
def race_plot():
    import numpy as np
    import matplotlib.pyplot as plt

x = np.linspace(0,0.9,10)
y = np.random.random((10,))
    _sort = np.argsort(y)
```

LATEX in Slides

Alert

Use \$ \$ or \$\$ \$\$ to display latex in Markdown, or embed images of equations $\angle T_EX$ needs time to load, so keeping it in view until it loads would help.

$$\int_0^1 \frac{1}{1-x^2} dx$$

Python

```
1 slides.write('## Built-in CSS styles')
2 slides.css_styles.display()
```

Built-in CSS styles

Use any or combinations of these styles in className argument of writing functions: className Formatting Style 'align-center' ____Text___ 'align-left' 'align-right' ----Text 'rtl' اردو عربی —— 'info' Blue text. Icon i for note-info class. 'tip' Blue Text. Icon ♀ for note-tip class. 'warning' Orange Text. Icon / for note-warning class. 'success' Green text. Icon ✓ for note-success class. 'error' Red Text. Icon for note-error class. 'note' > Text with note icon. 'slides-only' Text will not appear in exported html report. 'report-only' Text will not appear on slides. Use to fill content in report. 'export-only' Hidden on main slides, but will appear in exported slides/report. 'jupyter-only' Hidden on exported slides/report, but will appear on main slides.

Serialize Custom Objects to HTML

This is useful for displaying user defined/third party objects in slides

This is all code to generate slides

Python

```
1 def demo(self):
       "Demo slides with a variety of content."
       self.close_view() # Close any previous view to speed up loading 10x faster on average
       self.clear() # Clear previous content
4
       with self.set_dir(os.path.split(__file__)[0]):
6
           file = '../_demo.pv'
           raw source = self.source.from file(file).raw
8
           N = raw_source.count('auto.') + raw_source.count('\n---') + 1 # Count number of
           self.create(*range(N)) # Create slides first, this is faster
10
           self.shell.run_line_magic('run', file) # Run demo in same namespace
11
12
       return self #_demo.demo(self) # Run demo
13
```

e:\research\ipyslides\ipyslides_demo.py

```
1 # Author: Abdul Saboor
2 # This demonstrates that you can generate slides from a .py file too, which you can imposs import time
4
5 from ipyslides.core import Slides
6 from ipyslides.writer import write
7 from invslides formatters import libraries repres nlt2html
Author: Abdul Saboor Jayloury | Feb 08, 2023 28 / 30
```

Slides keep their full code if they are not made by @frames decorator!
